eBook and Data Extract

The Gazetteer of British Place Names

October 2013 Edition

Terms of Use

The purchase of the Gazetteer of British Place Names eBook and Data Extract confers on the purchaser a non-exclusive licence to use the data for personal or commercial use, provided the data is directly not sold-on or licenced to third parties.

The information contained in the gazetteer has been published in good faith and every effort has been made to check its accuracy. Nevertheless, the publisher, editor or compilers can accept no responsibility for errors or omissions, changes in the details given, or for any loss, damage or inconvenience thereby caused.

Data Extract

The Data Extract is contained in the Comma Separated Variable file *Gazetteer.CSV* which can be easily imported into Excel, Access etc. The Data Extract contains the same 8 Columns as the online version and the Place Name Index in the eBook (see Detailed Contents of the Gazetteer). Note that in Columns 4-8 of the Data Extract the full names of the administrative areas are given, rather than the abbreviations used in the online version and the Place Name Index in the eBook.

Contents of the eBook

1.0	Main Features of the Gazetteer
2.0	Detailed Contents of the Gazetteer
3.0	Key to Abbreviations
Appendix A	Maps
	Map of the Historic Counties
	Map of the Administrative Counties and Unitary Authorities
Appendix B	Place Name Index

1.0

Main Features of the Gazetteer

The gazetteer can be considered to have three main functions: it provides an exhaustive index to the place names of Great Britain; it relates each place name to its historic county; it relates each place name to a set of administrative areas. In Sections 1.1-1.3 of this introduction we discuss each of these aspects. In Section 1.4, we discuss the need for a fixed general-purpose geographical reference frame for Britain and propose that the historic counties are the only sensible choice for such a reference frame.

1.1 Place Name Index

Over 50,000 place names are included alongside their National Grid reference. The aim is to include every settlement (above isolated houses and farmsteads) which has a distinct name and identity. This includes hamlets, villages, towns and cities. Each district within an urban area which has a distinct name and identity has been included as a separate entry. Places whose names have more than one standard spelling are included under each spelling. Similarly, places with Welsh and English or Gaelic and English names are listed under both.

1.2 The Historic Counties of Great Britain

Full details of the historic county within which each place lies are included.

The historic counties of Great Britain are geographical entities whose ages and origins vary. Most of those of England pre-date the Norman conquest. The thirteen historic counties of Wales were fixed by Statute in 1535 and most of those of Scotland are of at least this age. Whilst each county was probably created with some kind of administrative purpose in mind, the counties have long since come to represent something much more than this. They have become bedrocks of the history, culture and geography of Britain. They provide an instant means of reference to different parts of the country, to a set of cities, towns and villages; to distinctive scenery, architecture and wildlife; to

particular industries and pastimes, accents and dialects, tourist attractions, weather and so on. A large literature focuses on each of the counties; they give their names to clubs and societies, to teams people play for. Above all else, they are places - places where people live and "come from", where they "belong".

In previous centuries the counties were directly utilised by Parliament for various administrative purposes (e.g. sheriffs, lieutenants, justices, parliamentary seats). However, no single administrative function has ever defined them. Their geographical identity has always been paramount. Whilst the counties are no longer directly used as the basis for any major administrative purpose, they remain important geographical and cultural entities. They are also the ultimate source of definition for the boundaries of many modern administrative areas.

Because various other types of statutorily created administrative areas have used (and still do) the word "county", there has long been a need for a terminology which distinguishes between the counties themselves and each of these sets of administrative areas. Such administrative areas have always been understood to be separate entities to the counties themselves, although based to a greater or lesser extent upon their areas. Between 1851 and 1881, the Census Reports used the phrase "Counties Proper" to distinguish between the historic counties and the Registrar-General's "registration counties" (these latter were entirely artificial creations intended to help the enumeration and analysis of the Censuses). After 1891 the Census Reports used the phrase "Ancient or Geographical Counties" or simply "Ancient Counties" to distinguish the Counties themselves from the "administrative counties" (top tier local government areas) created in 1889.

The need for a distinguishing terminology still exists since there are presently two different sets of administrative areas each of which has been given the unqualified label "county" (i.e. those of the Local Government Act 1972 and those of the Lieutenancies Act 1997).

The [Encyclopaedia Britannica](#) uses the phrase "historic county" to refer to one of the ancient or geographical counties. Another commonly encountered synonym is "traditional county". Within the Gazetteer, where necessary for clarity, we adopt the terminology used by the Encyclopaedia Britannica and refer to the counties themselves as the "historic counties". Any unqualified reference to "county" or "counties" should be taken to refer to one or more of the historic counties.

A [Map of the Historic Counties](#) is included as part of the gazetteer.

Despite the continued prominence of the historic counties in the cultural life of Britain and in common geographical parlance, many modern works of reference tend to overlook them. Often such works attempt to use local government areas as a basis for descriptions of geographical location. The problems and pitfalls of this approach are discussed in Section 1.4. The historic counties provide a far more sensible, fixed, reference frame to base such descriptions upon.

1.3 Administrative areas

The gazetteer provides details of the main types of administrative area associated with each place name. Those included are local government areas and police areas. These areas were chosen because they are those which the public or the media most commonly encounter. Other arguably important administrative areas currently not included in the gazetteer include the registration districts of births, deaths and marriages, the fire service areas, the commission of the peace areas (i.e. of magistrates courts) and the complex geographical areas of the National Health Service.

Each of the sets of administrative areas included in the gazetteer has been created in the recent past by an Act of Parliament for a specified administrative purpose. Each of them has no existence beyond its particular administrative remit. In particular, Parliament has never imposed any wider geographical or cultural role of any of them. The explanatory notes of Section 2 detail the relevant Act which governs the existence of each of these sets of areas. Brief notes are also given of the administrative purposes for which these areas exist.

1.4 The need for a fixed geographical reference frame

Each of the sets of administrative areas included in this gazetteer forms its own "administrative geography". Each particular "administrative geography" is important within its own field and clearly a general understanding of the geographical organisation of the major forms of public administration is important. However, there has been an increasing trend in recent years (i.e. by publishers and the media in general) to try to use administrative areas as a basis for general descriptions of geographical location.

There are several major drawbacks to such an approach:

(i) Such administrative areas were created to facilitate the provision of particular specified public services. They were not created to fulfill a general popular geographical (or cultural) role. To use them as such is to assign to them a function and status not given them by Parliament.

(ii) The names and areas of administrative units change frequently. For example, local government areas have been the subject of two major reforms in the last 30 years. Many of the current set are unfamiliar to many people and are unlikely ever to become familiar. It is unrealistic to expect people to re-learn their whole notion of "where places are" every 20 years or so.

(iii) There are several types of important administrative areas. There is no obvious reason to choose one type of "administrative geography" over another as a basis for general-purpose geography.

(iv) Many modern administrative units have names which are borrowed from a town or city within their area. This renders them useless as a basis for popular geography. Clearly, for example, one can't describe Swindon as being "in Swindon" or Telford as being "in Telford and Wrekin".

(v) Many administrative areas do not conform to commonly held ideas of cultural identity. Surely no-one can be expected to say "I come from Rhondda Cynon Taff" !

The interests of general-purpose geography require a geographical framework which is fixed, popularly understood and firmly rooted in history, tradition and commonly held concepts of cultural identity. The historic counties are the natural choice for this framework because:

(i) They are fixed in name and area.

(ii) They have provided the standard geographical framework of Britain for centuries. They are the only geographical framework which can logically be used for the description of past events. The relation of present and future events to the past requires their use. Imagine trying to write a history of Britain based upon sets of areas which radically changed every 20 years or so !

(iii) Their names and areas are still generally familiar to many people. Indeed, they are still commonly used by many as a basis for general-purpose geography.

(iv) They are still important cultural entities. Many people have a strong sense of loyalty to and identify with their county. Innumerable sporting, social and cultural activities are still based upon them.

(v) The names of all of the historic counties are now an acceptable part of Royal Mail postal addresses. (In contrast many modern local government area names are not acceptable since they clash with Post Town names).

The 6 counties of Northern Ireland, like those of Great Britain, are no longer used as the basis for any major form of public administration. Yet they are almost universally used as the standard geographical framework for Northern Ireland. The administrative areas of Northern Ireland are not generally used in a general-purpose geographical context. The case for the general adoption of this convention within Great Britain is overwhelming.

1.5 Disclaimer

Whilst every effort has been made to ensure the accuracy of the information within this gazetteer, the huge nature of such a publication means that errors must inevitably occur. We can do no better than to quote from the introduction to the 1848 edition of Lewes's Topographical Dictionary of England:

"The proprietors cannot entertain the hope that, in a work compiled from such a variety of sources, and containing notices so numerous and diversified, errors have not occurred. They have, however, regardless of expense, used the most indefatigable exertions to attain correctness, and to render the work as complete as possible; and they, therefore, trust that any occasional inaccuracy will receive the indulgence of the subscribers."

2.0

Detailed Contents of the Gazetteer

The gazetteer comprises the following columns:

- Place Name
- National Grid Reference
- Latitude and Longitude
- County
- Administrative County
- District
- Unitary Authority Area
- Police Area
- Country

A full explanation of the contents of each of these fields can be found below.

Place Name

The intention is to include the name of every settlement (above isolated houses and farmsteads) which has a distinct name and identity. This includes hamlets, villages, towns and cities. Each district within an urban area which has a distinct name and identity has been included as a separate entry. The gazetteer does not, in general, contain references to other geographical features (e.g. rivers, mountains, valleys etc.). However, certain of these also give their names to settlements within or close to them and, in such cases, these names are included.

A problem of modern popular geography is what is meant by names like "Birmingham", "Manchester", "London", "Liverpool", "Newcastle". There are no clear unambiguous bounds to any of these entities. Where does Birmingham stop and Sutton Coldfield begin? Is Old Trafford in Manchester? Is Pinner in London? The solution we adopt within this gazetteer is to restrict the meaning of these terms to those areas close to the settlement centre. e.g. the entry for Birmingham only refers to the area close to Birmingham city centre. Each distinct locality within

the larger urban area which is popularly known as "Birmingham" has its own entry within the gazetteer.

We do not attempt here to give a detailed discussion of the history and orthography of British place names. Several excellent books on this subject are available, the standard authoritative work generally being considered to be *The Names of Towns and Cities in Britain* by Gelling, Nicolaisen and Richards (Batsford 1970, 1986). However, a feature of place names which cannot be ignored is that both their spellings and pronunciations have changed (often radically) with time. Indeed, the idea of a "standard" spelling of a place name is a relatively modern one. The three main factors which have led to a standardisation of the spellings of place names have been the recording of them on Ordnance Survey maps, the use of them as "postal localities" by the Post Office and the denoting of them by road signs erected by local authorities. However, even today one can find many place names spelt in two or more ways depending on which map, postal address book or road sign one looks at. Within the gazetteer, we have attempted to include all such variations of the spelling of a given place name by including a separate entry for each spelling. Our benchmark has been to include any spelling denoted on an O.S. map or used by the Post Office since the start of the twentieth century, although we also include any other locally accepted spelling which is known to us. Hence, the gazetteer does not provide an exhaustive list of the spellings of a particular place name throughout its entire history.

Many places within Wales have both a Welsh name and also an English or anglicised name. In such cases, each name is given a separate entry. We have taken a similar approach to those places in Scotland which have a commonly used Gaelic name as well as an English or anglicised name.

Those place names which have an affix of the type "The", "Old", "New", "North", "South", "East", "West", "Lower", "Upper" etc. are included twice, e.g. as "West Acre" and "Acre, West".

National Grid Reference

These represent the 1km x 1km square in which the "centre" of the settlement concerned lies. While the "centre" of a village is easy to define, the area which one might call the centre of a large town or city can spread into more than one 1km x 1km square and a subjective decision has been taken here. A determination of the "centre" of districts within urban areas also presents problems since in many cases their bounds and centres are not unambiguously discernible. Our approach

has generally been to base it on the site of the village or geographical feature from which the district took its name. However, many modern housing estates have no such "centre" and a subjective decision has had to be made in some cases.

Latitude and Longitude

These are the latitude and longitude of the "centre" of the settlement (see comments above about the problem of deriving this in certain cases).

County

The vast majority of places in Britain can be unambiguously assigned to a particular historic county. Unlike modern administrative areas, the boundaries of the counties are not laid out in any single Act of Parliament. Many of them pre-date statutory law itself. Nonetheless, by the beginning of the nineteenth century their bounds had been fixed and known by repute to great accuracy for many centuries. A major task of the Ordnance Survey during the nineteenth century was to ascertain and mark out such "reputed boundaries" (not just of the counties but also of parishes, townships, hundreds, boroughs etc.). By the late 1880s the whole of Britain had been accurately surveyed on a scale of 1:2500 (25 inches to one mile). The resultant set of maps, known as the "1st edition", provided the first planimetrically accurate determination of the boundaries of the counties. It is worth noting that it is on such "reputed boundaries" that many modern administrative areas are still based. For example, the modern "administrative county" of "Norfolk" could not be defined if the O.S. had not accurately determined the "reputed boundaries" of the historic county of Norfolk. [Map 1 \(See Appendix A\)](#) is a large-scale map of the historic counties of Britain.

There are, however, several areas of potential ambiguity. A discussion of each of these and the way in which they are dealt with within the gazetteer is presented below.

(i) Detached Parts

Historically, there were many instances where a small part of one county was geographically detached from the main body of that county and entirely surrounded by the main body of another county (or between 2 other counties). Most of these "detached parts" were deemed by the Counties (Detached Parts) Act 1843 to form part of their surrounding county "for all purposes". Whether this was meant to be a real territorial change or an administrative convenience is a debatable

point. Certainly the General Register Office within its Census Reports considered it to be a real territorial change. Nonetheless, local knowledge of at least some of these detached parts does still persist and, in any case, they are of interest to historians and genealogists. Hence, for those settlements which lay within a detached part prior to the 1843 Act, we have noted this fact in Column 3, e.g.

Dayhouse Bank SO9678 Worcs, pre-1844 in det pt of Shrops

A few detached parts were left unaffected by the Counties (Detached Parts) Act 1843. These remain part of their historic parent county. Loyalty to that county is still strong in some of these (e.g. in Dudley to Worcestershire, in the Maelor Saesneg district to Flintshire). In the case of settlements within one of these detached parts, Column 3 lists their ancient or geographical county followed by "det". The county in which the detached part concerned is "locally situate" (i.e. lies within) is then listed, e.g.

Dudley SO9490 Worcs (det), locally in Staffs

(ii) Settlements in more than one County

There have since ancient times been settlements which lay across county borders (e.g. Lamberhurst in Kent/Sussex, Todmorden in Lancs/Yorks). Twentieth century development has added considerably to their number. Cases where a significant part of a settlement lies in more than one county are dealt with by including reference to each of the relevant counties, e.g..

Dancing Green SO6320 Herefordshire / Gloucestershire

In such cases the county listed first is that in which the "centre" of the settlement lies or with which the settlement has been traditionally associated.

(iii) The Counties Corporate

There are, within England and Wales, 18 towns or cities which have, at various times, been granted charters apparently making them "counties" in their own right. These areas are collectively known as the "counties corporate". Such charters were actually concerned with the judicial arrangements of these towns and cities rather than their geographical status. There has always been debate about whether these areas should be considered to be real counties, equivalent to, for example, Devon and Lincolnshire. The General Register Office, within its Census Reports, never considered them to be so and always dealt with them as being part of the county in which they geographically lay.

Numerous legal judgments found that the "counties corporate" were not "Counties in the ordinary sense of the term". This convention is followed in this gazetteer. This is done without prejudice to the special status which many feel these places deserve.

(iv) The Ridings of Yorkshire

Yorkshire has since ancient times been divided up into the City of York and the three ridings (North, West and East). The ridings have never been considered counties in the ordinary sense of the term. However, the vast size of Yorkshire has meant that, in terms of administration and popular geography, each of the Ridings has often been treated as though a separate county. This gazetteer maintains this tradition. The relevant riding is denoted after "Yorkshire" thus:

Welton SE9627 Yorkshire, East Riding

Carperby SE0089 Yorkshire, North Riding

Bridwell SE3401 Yorkshire, West Riding

(v) Ross-shire and Cromartyshire

The county of Cromartyshire consists of several parts distributed within the county of Ross-shire and between Ross-Shire and Sutherland. In consequence, Ross-shire and Cromartyshire are often considered as a single geographical unit. Administrative areas based upon them have inevitably used their combined area and been given the label "Ross and Cromarty". However, the bounds of each county have been determined by O.S. to great accuracy. It, therefore, seems reasonable within this gazetteer to list places either "Ross-shire" or "Cromartyshire" as appropriate, not least to assist those using the gazetteer for historical or genealogical studies.

(vi) Alternative County names

The county names used in the Gazetteer are those by which each county has been most commonly known throughout its history. Certain county names (e.g. Dorset, Somerset, Devon, Glamorgan, Merioneth) have occasionally had a "shire" suffixed to them but are here presented in their more common "shire-less" forms.

Several Scottish counties have alternative names by which they are also sometimes known. These are listed below.

Angus	Forfarshire
East Lothian	Haddingtonshire
Midlothian	Edinburghshire
Morayshire	Elginshire
West Lothian	Linlithgowshire

The counties of Wales have, of course, commonly used Welsh names. The following versions are those recommended by The Language and Literature Committee of the Board of Celtic Studies of the University of Wales (which advises the Ordnance Survey on the orthography of Welsh place names).

Anglesey	Sir Fon
Brecknockshire	Sir Frycheiniog
Caernarfonshire	Sir Gaernarfon
Cardiganshire	Ceredigion
Carmarthenshire	Sir Gaerfyrddin
Denbighshire	Sir Ddinbych
Flintshire	Sir y Fflint
Glamorgan	Morgannwg
Merioneth	Meirionnydd
Monmouthshire	Sir Fynwy
Montgomeryshire	Sir Drefaldwyn
Pembrokeshire	Sir Benfro
Radnorshire	Sir Faesyfed

Administrative County, District, Unitary Authority Area

In practical terms there are areas of England where local government service provision is split between a "county council" and several "district councils" and, throughout the rest of Britain, local government service provision is the responsibility of a single local authority. Sadly, statutory terminology does not reflect this simple situation. In England, a "district council" may share responsibility with a "county council" or it may be the sole council in its area. Similarly, a "county council" may share responsibility with several "districts" or it may be the sole council. In Wales, despite all local authorities having the same responsibilities, some are called, "county councils", some "county borough councils" and the rest just "councils". In Scotland all local authorities are just called "councils".

Our solution to this confusing situation is to offer our own terminology based upon two terms: "administrative county" and "unitary authority area". The "administrative counties" are defined as those local government areas of England within which the responsibility for local government service provision is shared between a "county council" and several "district councils". The "unitary authority areas" are those local government areas within which a single local authority is responsible for all service provision.

For places that lie within an "administrative county", the Gazetteer lists the name of the "administrative county" and the name of the local government "district". For places that lie within a "unitary authority area", the Gazetteer lists the name of the "unitary authority area". In this way both the structure of local government and the name/s of the relevant area/s can be determined.

The structure of local government within "Greater London" is still principally governed by the London Government Act 1963. This Act created the "London boroughs" and their councils. It left the Corporation of the City of London in charge of administration within the City. The status of the "Inns of Court" (i.e. the Inner Temple and the Middle Temple) was also unaffected by the Act. Each of these continues to be administered by a "Master of the Bench". The Act also created "Greater London" itself, defining it to be the sum of the areas of the "London boroughs", the City of London and the Inner and Middle Temples. The Act as passed also created the "Greater London Council" (GLC).

Outside of "Greater London", the structure of local government within England and Wales is governed by the Local Government Act 1972 (LGA 1972). As originally passed, this Act divided both England and Wales into "local government areas" which were to "be known as counties" and within which there were to be "districts". The "counties" were further subdivided into the "metropolitan counties" (e.g. "Greater Manchester", "Tyne and Wear" etc.) and the "non-metropolitan counties". Originally each "county" had a "county council" and each "district" had a "district council". The only exception to this county/district structure were the "Isles of Scilly" which were deemed by the 1972 Act and Statutory Instrument SI 1978/1844 to be a "local government area" with a council known as the "Council of the Isles of Scilly". Hence, the "Isles of Scilly" is not a part of any of the "counties" of the 1972 Act (and is considered to be a "unitary authority area" in our terminology).

The Local Government Act 1985 abolished both the GLC and the "county councils" of the "metropolitan counties" although "Greater London" and the "metropolitan counties" themselves were not abolished. All local authority functions in these areas were devolved to the "London boroughs" and the "metropolitan district councils". These are considered to be "unitary authority areas" in our terminology. The Greater London Authority Act 1999 created the "Greater London Authority". However, the GLA is better considered as a regional assembly than a local authority. Whilst it has a strategic role in promoting the economic and social development and the environment of "Greater London", it is specifically not empowered to provide those services generally associated with local authorities (e.g. education, social services, housing). Such powers remain with the "London boroughs". Hence, we do not consider "Greater London" to be an "administrative county" or equivalent in this gazetteer.

The Local Government Act 1992 created a review process within England which, thus far, has led to the creation of a further 46 local government areas which have only one council with responsibility for the provision of all local government services. There are three different ways in which this has been done:

(a) 39 "counties" have been created which have only a single district, this district having the same name and area as the "county" (e.g. "Milton Keynes", "Swindon", "Southend-on-Sea"). There are no "county councils" in these "counties". All local government functions are exercised by the "district councils".

(b)The LGA 1972 "county" of Berkshire still exists but it now has no "county council". All administrative functions have been devolved to the 6 "district councils".

(c)The LGA 1972 "counties" of the "Isle of Wight" "Northumberland", "Whitchurch", "Shropshire", "Cornwall" and "County Durham" now have no "district councils". The sole council is the "county council".

All 51 of these areas are considered to be "unitary authority areas" in our terminology.

There still exist within England, 34 "counties" (within the meaning of the LGA 1972) which have a "county council" and several districts within them, each of which has an existing "district council". These areas are "administrative counties" within our terminology.

Meanwhile the Local Government (Wales) Act 1994 amended the LGA 1972 so as to abolish the "counties" and "districts" of Wales and, in their place, create 22 "new principal areas". These areas are subdivided into "counties" and "county boroughs" (although they are identical in every other respect). Local authorities can choose to call themselves "county council" or "county borough council" (as appropriate) or simply call themselves "council". These are considered to be "unitary authority areas" in our terminology.

The Local Government etc. (Scotland) Act 1994 divides Scotland into a single set of 22 "local government areas". All local authorities are simply known as "councils". These are considered to be "unitary authority areas" in our terminology.

Map 2 (See Appendix A) shows the distribution of the 34 "administrative counties" and 177 "unitary authority areas" of Britain. Note that, in terms of legislation, there are ten distinct types of local government area which fall under the "unitary authority area" label. The map and the accompanying keys show the breakdown of the "unitary authority areas" into these ten categories.

It should be understood that the "counties" of the LGA 1972 (or, indeed, any of the other local government areas described above) are not replacements for or amendments to the historic counties. Rather they are administrative areas created for certain specified administrative purposes. Parliament has never given them a wider geographical or cultural role. They are totally separate entities to the historic counties,

as the Government has confirmed on many occasions (see "[County confusion - and how to resolve it](#)" (this is a link to the *County-Wise* website) for a more detailed discussion of this point).

Local authorities are responsible for numerous important administrative duties. The councils of the "administrative counties" of England are responsible for education, social services, economic development and transport. The "district councils" within these areas are responsible for housing, planning, paving and street lighting, public health, leisure and amenities and waste management. Within the "unitary authority areas" the sole council is responsible for all of these services.

Police Area

The areas of the Metropolitan Police and the City of London Police are defined by Section 76 of the London Government Act 1963. The rest of England and Wales is divided into "police areas" by the Police Act 1996. Scotland is similarly divided into "police areas" by the Police (Scotland) Act 1967. Most "police areas" are coterminous with one or more local government areas.

The legislation states that each "police area" must have both a "police force" and a "police authority". Police authorities are responsible for maintaining an effective and efficient police force in their areas.

Country

The Gazetteer lists whether a place is under the jurisdiction of the Scottish Parliament or the National Assembly for Wales.

The Scottish Parliament was established by the Scotland Act 1998. It has the right to pass primary legislation on most matters relating to Scotland. The main areas of administration and law devolved to the Scottish Parliament include health, education, local government, social work, housing, planning, economic development, tourism, most aspects of the criminal and civil law, criminal justice and prosecutions, environment, agriculture, forestry, sports, fisheries, and the arts.

The Scottish Executive (whose members are collectively known as the "Scottish Ministers") is the Government for Scotland on all devolved matters. It consists of the First Minister (elected by the Scottish Parliament), the Lord Advocate and the Solicitor General for Scotland and other Ministers appointed by the First Minister.

The Scottish Parliament has jurisdiction over the whole of Scotland (as referred to in Acts of Union of 1706 and 1707).

The National Assembly for Wales was created by the Government of Wales Act 1998. The Assembly has the power to develop and implement policy in a range of areas including agriculture, education, health, economic development, the environment, housing, local government, social services, tourism, transport and the Welsh Language. The sixty members of the Assembly delegate their executive powers to the First Secretary, who is elected by the whole Assembly. The First Secretary in turn delegates responsibility for delivering the executive functions to a number of Assembly Secretaries. Together they form the Assembly's executive committee, the Assembly Cabinet, which makes many of the Assembly's day to day decisions.

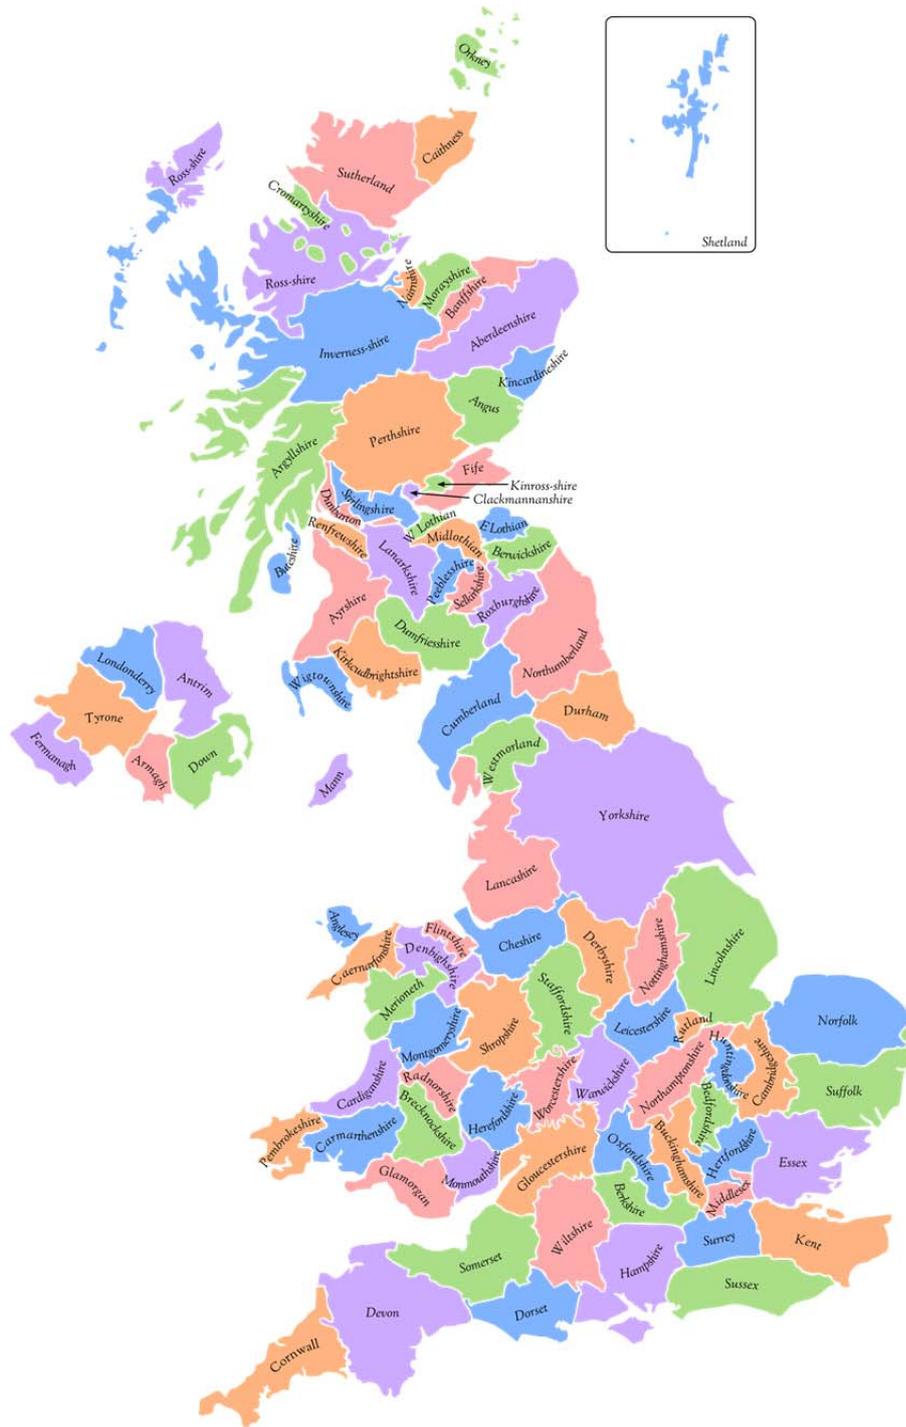

The "Wales" covered by the Assembly is that area deemed to be "Wales" by the Local Government Act 1972 for the purposes of local government. It differs slightly from the Wales referred to in the Laws in Wales Act 1535 (i.e. the act which united England and Wales into one country) since this Act attached several small parts of Wales to Shropshire, Herefordshire and Gloucestershire. These areas are within "England" within its meaning in the Local Government Act 1972 and hence are not covered by the National Assembly for Wales.
